Hong Kong IPO Data Collection: Team Instructions

Repository: github.com/GZ-November/urop-hk-ipo · October 2026

You tell an AI coding agent a listing period; it uses this repository to collect, verify and package Hong Kong IPO data from official HKEX disclosures.

1 Choose the agent

- **Use Claude Code** (terminal CLI or desktop app). OpenAI Codex CLI also works.
- The agent must run shell commands, reach the Internet and launch **subagents**; subagents perform the independent review. Browser chat (claude.ai, ChatGPT) cannot run the pipeline.
- Your computer needs Git and Python 3.9+ on macOS or Linux. On Windows, use WSL.

2 Install once

```
git clone https://github.com/GZ-November/urop-hk-ipo.git
cd urop-hk-ipo
python3 tools/bootstrap.py
```

This installs the locked dependencies (and Python 3.12 if needed) and the `hk-ipo-collect` agent skill. Add `--skills both` to use the skill from any folder.

3 Ask for a period

Open the agent inside the `urop-hk-ipo` folder (`claude` or `codex`) and type one sentence:

> **Collect Hong Kong IPOs listed in 2025 Q4.**

- In Claude Code you can also type `/hk-ipo-collect 2025Q4` .
- Periods: `2025`, `2025H2`, `2025Q4`, `2025-11`, `2024Q3..2025Q2` or explicit dates. Main Board and GEM are both collected unless you say otherwise.
- After an interruption, say *"Continue the HK IPO collection."*

The agent then downloads each prospectus and allotment notice, extracts every field with its source page, has a second subagent review it, and writes only reviewed values. Expect several hours per quarter (about 15–45 Main Board IPOs).

4 What you get

One ZIP file in the repository's `deliverables/` folder, plus a written report from the agent.

In the ZIP	Use it for
START_HERE.html	Open first: status, issuers and links to everything below
Excel workbook	One per board and quarter; one row per IPO (202 variables on the Main Board)
Clean CSV	Analysis-ready data for Python, R or Stata
Codebook	Definition, unit and source of every field (Markdown and JSON)
Evidence	Extracted values with source page and quote, review records, disclosure links
Quality reports	Audit and gate status, `quality_summary.json`, SHA-256 manifest

The agent's report adds, per quarter, issuer counts, listing dates, missing fields, pending reviews and source gaps.

5 Read the data correctly

- Empty cell: not disclosed or not verifiable. It is never a zero.
- *Pending review*: no independent reviewer was available, so those values are not in the workbook.
- A failed recent quarter usually means HKEX has not published the data yet, not zero IPOs.

More detail: `docs/QUICKSTART.md` (Chinese and English) and `docs/AGENT_INSTRUCTIONS.md` in the repository.
